Figure 10 is a line graph showing the normalized image coordinates for the x and y components of a point over time. The x-axis represents time from 0 to 1.0, and the y-axis represents normalized image coordinates from 0.2 to 0.8. The x-coordinate (purple line) remains relatively stable around 0.64. The y-coordinate (orange line) starts at 0.5 and drops to approximately 0.35 at t=0.59, then exhibits several sharp peaks and troughs, with peaks labeled 0.56, 0.55, and 0.55. Vertical shaded regions indicate specific time intervals.
